SourceKit

BETA V2.0 / EARLY ACCESS

Find engineers by what they build.

AI-powered technical sourcing, grounded in real GitHub data.

getsourcekit.vercel.app

THE PITCH

SourceKit finds software engineers by analyzing their actual GitHub code contributions, not LinkedIn keywords. Enter a role, get a scored pipeline in minutes. Now with Exa Websets for persistent candidate collections and Parallel.ai for intelligent JD extraction.

HOW IT WORKS

You Input — Role / JD / URL ▶ **AI Strategy** — Claude builds plan ▶ **You Refine** — Edit repo list ▶ **Multi-API Search** — Exa + Parallel + GitHub ▶ **Pipeline** — Scored candidates

WHAT MAKES IT DIFFERENT

Code Signal
Scored on commits and PRs, not keywords

AI Strategy
Claude builds repos, skills, poach list

Persistent Pipeline
Exa Websets auto-update with new matches

NEW IN V2.0 NEW

Exa Websets
Persistent candidate collections with criteria-based filtering and auto-monitoring

Parallel.ai
Intelligent JD extraction from any URL. Web search enrichment for deeper candidate context.

TECH STACK

Claude AI · Exa Search · Exa Websets · Parallel.ai · GitHub API · React + TypeScript · Supabase · Vercel

CANDIDATE SCORES

Strong 80+	Review 60-79	Low Signal <60

QUICK START

1. **Sign in** with Google at getsourcekit.vercel.app
2. **Enter a role** by typing role+company, pasting a JD, or dropping a job URL
3. **Edit the repo list** / this is the biggest lever for result quality
4. **Run the search** and filter by language, commits, location
5. **Review candidates** / try "Find LinkedIn" and "Enrich" on top matches
6. **Create a Webset** / set criteria and monitoring for persistent candidate tracking
7. **Pipeline** / add candidates, drag between stages, try bulk actions, export to CSV

PRO TIPS

Be specific
"ML Infra Engineer, training pipelines" beats "ML Engineer"

Edit repos
The AI list is a starting point. Your edits are the #1 quality lever.

Hidden gems
High commits + low followers = under-recruited and responsive

Use Websets
For recurring roles, set up monitoring to catch new contributors automatically

KNOWN LIMITATIONS

GitHub-only / use alongside LinkedIn for full coverage. Strategy takes 15-20s / expected, search is 30-60s. Some job URLs fail / paste JD text directly. LinkedIn links are AI-matched / always verify. Websets sync may take minutes / check back periodically.

Feedback?

Bugs, bad searches, UX issues, feature ideas. All welcome. Screenshots help. Mike Rubino / michael.f.rubino@gmail.com
