SourceKit Pilot Guide

Open SourceKit at **getsourcekit.vercel.app**

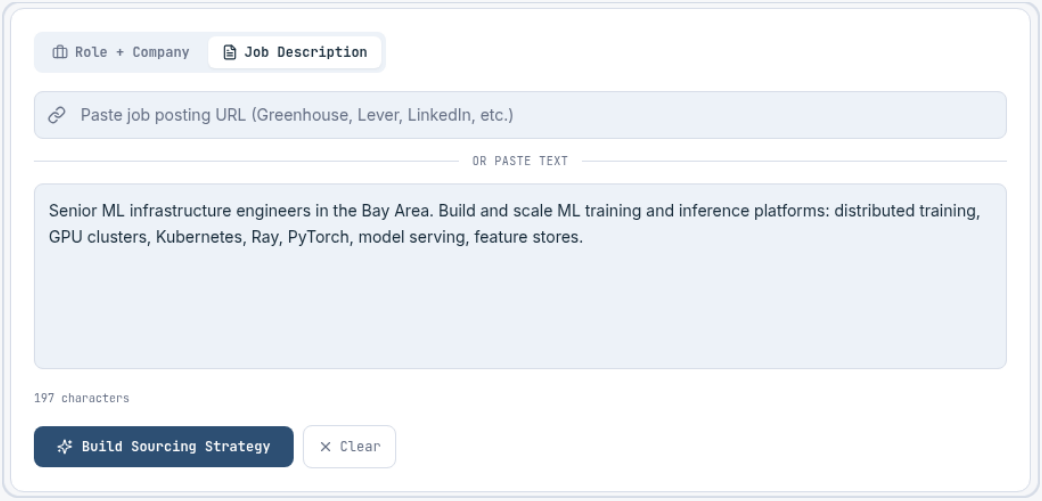

1 Sign in

Go to **getsourcekit.vercel.app** and sign in with your invited email, using Google or a password.

> **Why it matters:** Pilot access is invite-only.

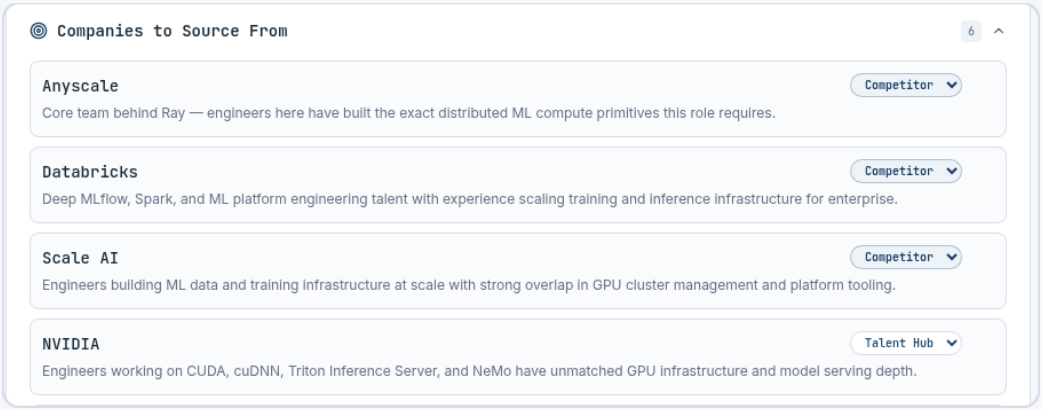

2 Paste a job description

In **New Search**, choose **Job Description**, paste the text or a posting link, and click **Build Sourcing Strategy**.

> **Why it matters:** More detail gives a sharper strategy. The build takes 30-60 seconds.

3 Review the strategy, then search

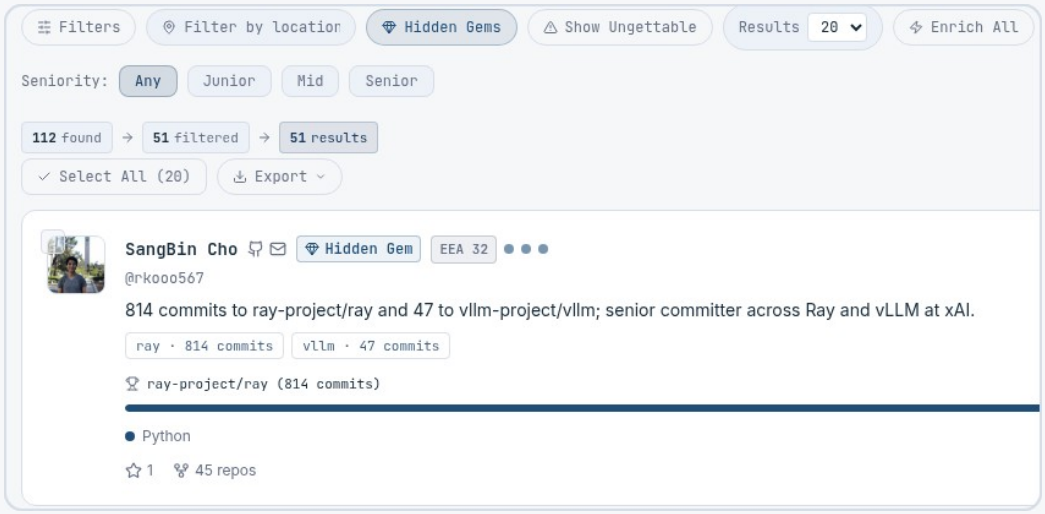

Edit the four parts below, then click **Search with this strategy**.

> **Why it matters:** Every entry is a suggestion; quick edits steer the whole search.

The four parts of a strategy

Part	What it shows	You can
Target repositories	Open-source projects where the right engineers work.	Remove or add repos.
Companies	Teams likely to have the talent, tagged Competitor, Adjacent or Talent Hub.	Retag or add companies.
Skills	Must Have (blue) and Nice to Have (gray). Must-haves weigh most.	Add or remove skills.
EEA signals	**Evidence of Exceptional Ability (EEA):** papers, competition results, notable open-source work.	Switch off any you do not need.

4 Scan results and Hidden Gems

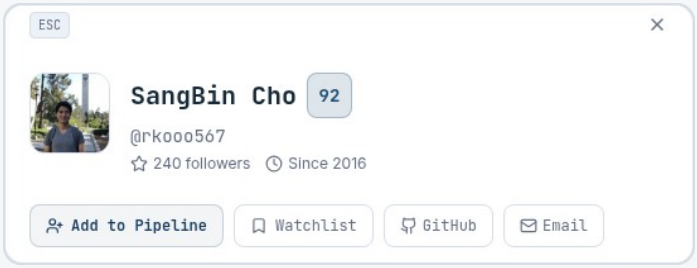

Candidates are ranked by fit score (0-100), each with a one-line reason. Click **Hidden Gems** to filter.

> **Why it matters:** It surfaces strong matches with a smaller public profile (high score, few followers).

---

5 Add to your pipeline

Open a profile and click **Add to Pipeline**. The candidate appears under Sourced in the **Pipeline** tab.

> **Why it matters:** Track each person from Sourced to Contacted, Recruiter Screen and Moved to ATS.

MORE TOOLS

Tool	What it does
People Search	One query across Exa, Harmonic, GitHub and **Firecrawl**, which finds people through GitHub issues, pull requests and research papers. Results are deduplicated and badged by source.
Find emails	Select up to 25 people and click **Find emails**.
Bulk Actions	Briefs, outreach drafts, a refined shortlist or a side-by-side comparison for selected people.
History	Every search is saved to reopen or rerun.

FAQ

How long does a search take?

Under a minute for the strategy, a few minutes for the search. You can switch tabs meanwhile.

What are the daily limits?

Per account, per day: **25 searches**, **150 enrichments** (email lookups, profile details) and **100 AI calls** (strategies, drafts, Bulk Actions). Limits reset at **midnight UTC (5pm PT, 4pm PT after Nov 1)**.

How do I get the best results?

Paste the full job description, start with Hidden Gems, and find emails only for your shortlist.

Why do I not see founders or executives?

Ungettable profiles (founders, executives, board members, very famous engineers) are hidden by default. Click **Show Ungettable** to include them.

Who do I contact for help?

Reply to **Mike Rubino** with access issues, questions or feedback.

ABOUT

SourceKit turns a job description into a sourcing strategy, then scores engineers 0-100 on their open-source work. The pilot is free and invite-only; a first session takes about 10 minutes.

Pedigree is not enough to make sound decisions. Use evidence as early as possible: at discovery, not after screening.

In short: sign in, paste a job description, review the strategy, filter Hidden Gems, add to pipeline.

For AI Fund portfolio CEOs. **Source:** SourceKit pilot build, demo-account screenshots. **Owner:** Mike Rubino, AI Fund. **Updated:** 2026-10-18.
