

SELLKIT QUICK START

Two-Page Guide for Mariah

Use SellKit to review signal-backed account and buyer recommendations, approve manual outreach drafts, and export rows. Nothing sends automatically.

Audience: Mariah Rubino

Mode: manual-first

Generated: Jun 9, 2026

What SellKit Does

- Finds target accounts and likely buyers using sourcing signals.
- Shows evidence for score, title fit, account fit, and email confidence.
- Prepares manual email copy, a LinkedIn note, and CRM-ready export rows.

Before First Use

- Use the approved work account.
- Confirm external enrichment tools are allowed.
- Keep Microsoft, Salesforce, and LinkedIn manual until policy approves direct access.

First-Time Onboarding: Answer These Five

Target company

Size, stage, geography, industries in/out.

Buyer titles

Strong yes titles and close-but-no titles.

Offer line

What she sells in one plain sentence.

Buying signals

Rank triggers and define what good looks like.

Email voice

Examples, subject style, length, and tone.

Daily Review Flow

1. Sign in and open [/sellkit](#).
2. Pick the highest-scored target in the review queue.
3. Check account fit, buyer title, signal evidence, and email confidence.
4. Review the buying committee and why-now reasoning.
5. Edit the draft if needed.
6. Approve only when the copy and evidence look right.

Approval Rules

No automatic send.
Copy and export stay human-approved.

Manual CRM.
Export CSV rows until Salesforce access is approved.

No LinkedIn automation.
Use profile links and notes by hand.

The screenshot shows the 'Mariah onboarding' form in the SellKit interface. It includes sections for 'Ideal target company', 'Buyer titles', 'One-line offer', 'Buying signals', and 'V1 operating mode'. The 'V1 operating mode' section has radio buttons for 'Provider keys stay server-side in Subbase' and 'Onboarding saves to this signed-in account'. The 'Save Progress' button is at the bottom right.

Onboarding. These answers tune target fit, signals, scoring, and draft voice.

The screenshot shows the 'Buying Committee Map' in the SellKit interface. It displays a table with columns for 'Primary Buyer', 'Technical Co-Sponsor', and 'Budget or Ops Sponsor'. The 'Primary Buyer' section shows 'Sarah Chen, VP, IT' with a 'High' score. The 'Technical Co-Sponsor' section shows 'VP, Platform Engineering' with a 'Medium' score. The 'Budget or Ops Sponsor' section shows 'Head of Transformation / IT Operations' with a 'Medium' score. Below the table, there is a 'Score Factors' section with a 'Seniority: VP+' and 'Data / Product function'.

Review. Read committee, evidence, score factors, and draft before approval.

Provider Roles and Guardrails

Use providers as stages in one workflow, not substitutes. Start broad, verify evidence, enrich only after scoring, and keep every send manual.

STAGE	PROVIDER	USE IT FOR	GUARDRAIL
Account discovery	Exa Company Search	ICP-matched company lists by industry, headcount, geography, funding stage, and technology.	Use company category, highlights, and structured metadata.
Buyer discovery	Exa People Search	Likely buyers, public profiles, current roles, location, and career context.	Run query variations and dedupe. Exa is not verified email.
Fast lookup	Parallel Entity Search	Quick people/company results for natural-language tests.	Use for candidate sets, not final cited enrichment.
ICP preview	Parallel FindAll Preview	Evaluate about 10 candidates before a full run.	Always preview first and tune match criteria.
List-building	Parallel FindAll or Exa Websets	Verified async lists with reasoning, citations, enrichments, and webhooks.	Cap match limits and enrich only matched candidates.
Account dossier	Exa Agent or Parallel Task	Buying committee, why-now, initiatives, objections, and talking points.	Use bounded JSON and require source URLs.
Contact enrichment	Apollo	Verified work email and company/person enrichment after scoring.	Batch in groups of 10. Avoid phone/personal email by default.
Fallback review	Clay	Spreadsheet-style human enrichment queues for ambiguous rows.	Test one row, set rate limits, return only needed fields.

Evidence-First Scoring

- **Signal strength:** link to source, date, excerpt, and why it matters.
- **Title fit:** cite the profile or bio used to identify the buyer.
- **Company fit:** cite metadata or source for size, industry, funding, or stack.
- **Email confidence:** show Apollo status separately from the score.

Cost and Compliance Defaults

- Cache provider responses by normalized query.
- Use Parallel Preview before full runs.
- Use Apollo only after score thresholds.
- Keep provider keys server-side.
- Store raw provider payloads separately from normalized rows.
